Waste Minimization Statement

Because of a very depressed business economy Cramer Plating was unable to convert the cyanide plating process over to non-cyanide during the year 2011 as planned, although there was a huge reduction from hexavalent chrome to trivalent chrome usage. Also during the last part of 2011 the lagoon reclamation project was started.

The company feels that this project will be a huge plus in the waste reduction numbers in the future, because with its elimination on site there will be more areas that can be developed with recycling methods available.
